                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Domain deleted CC49 antibodies comprise a heavy chain human CC49 domain deleted sequence in which CH2 domain has been deleted and are reactive with CD20 and comprise a heavy chain having a sequence of a derived domain deleted C2B8 construct where the CH2 domain has been deleted. Sequences of the invention are useful for imaging a neoplasm. They are also useful for treating myelosuppressed patients suffering from neoplastic disorder such as haematologic neoplasm, preferably non-complastic disorder, colon cancer and haematologic malignancy. They are useful for reducing tumour size, inhibiting tumour growth and/or prolonging the survival time of tumour-bearing animals and for treating tumours. The present sequence is a DNA encoding human C5E10 light chain protein. This sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel domain deleted CC49 antibody reactive with tumor associated -72, or C2B8 antibody reactive with CD20, useful for treating myelosuppressed patient suffering from a neoplastic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Braslawsky GR,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
         monomeric subunits, where the monomeric subunits are non-covalently associated. (I) is useful for treating a disorder, especially immune disorder, and neoplastic disorder such as relapsed Hodgkin's disease, resistant Hodgkin's disease high grade, low grade and intermediate grade non-Hodgkin's lymphomas, B cell chronic lymphocytic leukemia (B-CLL), lymphopalasmacytoid lymphoma (FD), mantle cell lymphoma (MCL), follicular lymphoma (FL), diffuse large cell lymphoma (DLCL), Burkitt's lymphoma, AIDS-related lymphomas, monocytic B cell lymphoma, angioinmunoblastic lymphodenopathy, small lymphocytic, follicular, diffuse large cell, diffuse small cleaved cell, large cell immunoblastic lymphoblastoma, small, non-cleaved, Burkitt's and non-Burkitt's, follicular, mixed small

                                                                                                                                                                                                                                                                            US-10-635-908-15 (1-214)
                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA sequences (AAT62929-30) respectively code for the light chain (AAW14931) and heavy chain (AAW14932) of murine anti-porcine soluble vascular cell adhesion molecule (VCAM) monoclonal antibody (MAb) 2A2. Hybridoma 2A2 was produced by standard techniques using recombinant, soluble porcine VCAM as immunogen. Chimeric antibodies can be produced by cloning MAb 2A2 and 3F4 (see also AAT62934-35) variable regions into expression plasmid pAPEX-3P modified to contain the human gamma4 constant region in place of the human gamma1 C1 region. Sequences are provided for 2A2 (chimeric) human G2/G4 cDNA (AAT62931), a 2A2 human G2/G4 expression plasmid insert (AAT62932), and a 2A2 human IGG4 expression plasmid insert (AAT62932), and a 2A2 human IGG4 expression plasmid insert (AAT62932), and a 2A2 human IGG4 expression plasmid insert (AAT62932). The chimeric antibodies are specific for poroline VCAM. They are useful for diagnosing human rejection of porcine xenotransplants and for improving xenotransplantation of porcine cells, tissues and organs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antibodies binding to porcine but not human cell interaction puuseful to treat and assay for rejection of xenografted porcine tissues or cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     28-SEP-1995;

                                                                                                                                                                                                                                                                                                                                          A DNA sequence (AAT62933) comprises a 2A2 human IgC4 expression plasmid insert sequence. It is obtd. by cloning the light chain (see also AAT62929) and heavy chain (see also AAT62930) variable region sequences of murine anti-porcine vascular cell adhesion molecule (VCAM) monoclonal antibody 2A2 into an expression plasmid modified to contain the human gamma4 constant region in plasmid of the human gamma C1 region. The encoded heavy chain (AAM14935) and light chain (AAM14935) can be used to produce a chimeric antibody that is specific for porcine VCAM. The chimeric antibody is useful for diagnosing human rejection of porcine xenotransplants and for improving xenotransplantation of porcine cells, tissues and organs into human recipients.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Anti-IL-8 MAb 5.12.14 VL/human IgG1 CL cDNA
A CDNA insert (AAT03363) in vector pA51214VL' codes for the light chain variable region of anti-human interleukin-8 mouse monoclonal antibody 5.12.14 and human IgG1 light chain constant region. The cDNA was obtd. 1 amplification of cDNA derived from 5.12.14-producing hybridoma cells using primers (AAT03352-55) based on light chain sequences. It is used
                                                                                                                                                                                                                                                                                                                                                                                        (GETH

                                                                                                                                                                                                                                              Methods for treating asthma in mammals with interleukin-8 (II-8) antagonists (anti-II-8 antibodies) have been produced. Murine 5.12.14 monoclonal antibody is an anti-II-8 antibody. The present sequence encodes the murine 5.12.14 variable light chain region and the human IgG1 constant light chain region chimeric monoclonal antibody. Anti-II-8 antibodies are especially used to treat or prevent allergic asthma in humans. They inhibit: (a) neutrophil chemotaxis in response to II-8; (b) II-8-mediated release of elastase from neutrophils and (c) binding of II-8 to neutrophils. Anti-II-8 antibodies can be used to treat many other inflammatory disorders, e.g. ischaemic reperfusion, ARDS, dermatitis, particularly bacterial pneumonia and inflammatory bowel disease. This chimeric Fab is used to construct a plasmid pantiII-8.2 which consists of murine-human variable/constant regions of both the light and heavy chains of 5.12.14 by various standard recombinant techniques. The recombinant human-murine chimeric Fab has anti interleukin-8 (II-8) activity and can inhibit the II-8 binding to human neutrophils. This anti II-8 Fab is used to prevent interleukin-8 mediated neutrophil chemotaxis which is useful in the treatment of ulcerative colltis and bacterial pneumonia. ```

The present sequence depicts the coding sequence for murine monoclonal antibody 5.12.14 light chain variable region and the human IgG1 light chain constant region. The 5.12.14 antibody is a murine anti interleuk: 8 (IL-8) IgG2a isotype. IL-8 is a neutrophil chemotactic peptide secret

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   by a variety of cells in response to inflammatory mediators. IL-8 can play an important role in the pathogenesis of inflamamory disorders such as adult respiratory distress syndrome (ARDS), septic shock and multiple organ failure. Treatment of bacterial pneumonia in a mammal comprises administering an anti IL-8 monoclonal antibody, such as, e.g humanised 5.12.14, that binds human IL-8 with a Kd of 10-8 to 10-11 M, inhibits neutrophil chemotaxis in response to IL-8, inhibits IL-8 mediated elastase release by neutrophils and does not bind to C5a, beta-TG or platelet factor 4. IL-8 specific monoclonal antibodies are especially for treating pneumonia caused by Streptococcus pneumoniae, E. coli or Pseudomonas aeruginosa in humans. The antibodies may also be used in the treatment of ulcerative colitis and other inflammatory conditions. (Updated on 17-OCT-2003 to standardise OS field)

                                                                                                                                                                                            This DNA encodes for the chimeric Fab 5.12.14 which comprises of complementarity determining regions (CDRs) of a light chain variable region of the murine species and light chain constant region of the human species and light chain constant region of the human species and light chain constant region of the human species. This chimeric Fab is used to construct a plasmid pantiII-8.2 which consists of murine-human variable/constant regions cooth the light and heavy chains of 5.12.14 yearious standard recombinant techniques. The recombinant human-murine chimeric Fab has anti interleukin-8 (II-8) activity and can inhibit the II-8 binding to interleukin-8 mediated inflammatory diseases and in the treatment of ulcerative colitis and bacterial pneumonia. This DNA sequence encodes a polypeptide (see AAW69307) comprising the CC light chain variable region of murine anti-interleukin-8 (II-8) CC monoclonal antibody (MAb) 5.12.14 (see AAW69305) and the human IgG1 light CC chain constant region. It was obtained by PCR amplification (see AAV55094 CC -95) and has been utilised in the construction of 5.12.14 Fab vector CC pantiII-8.2 (ATCC 97056). Humanised anti-II-8 MAbs are described for use in diagnostic applications and in the treatment of inflammatory CC disorders. The invention provides conjugates of an antibody fragment and a polymer, such as PEG, that have improved half-life, mean residence therapy of e.g. psoriasis, responses associated with inflammatory bowel disease (such as Crohn's disease associated with inflammatory bowel disease (such as Crohn's disease sundone, dermatitis, meningitis, concephalitis, uveitis, autoimmune diseases syndrome, dermatitis, meningitis, central nervous system inflammatory disorder, multiple organ injury CC syndrome secondary to septicaemia or trauma, alcoholic hepatitis, inflammations of the lung, including pleurisy, alveolitis, vasculitis, considerial pneumonia, chronic bronchitis, bronchiectasis, and cystic fibrosis.

CC (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                           New conjugates of antibody fragments - having covalently attached non-proteinaceous polymer molecules, particularly polyethylene glycol, for improving the residence time in the circulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     21-FEB-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US-10-635-908-15 (1-214) x AAV10292
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence encodes the murine 5.12.14 (anti-IL-8) monoclonal antibody (Mab) light chain variable region and the human IgG1 light chain constant region construct. This construct is used in a novel method for treating ulcerative colitis which involves the administration of an anti-IL-8 monoclonal antibody capable of binding to human interleukin-8 (IL-8) with a Kd of 10-8 to 10-11 M. This Mab also inhibits neutrophil chemotaxis in response to IL-8, inhibits IL-8-mediated elastase release by neutrophils and does not bind to C5a, beta -TG or platelet factor 4. The anti-IL-8 antibodies can also be used for the treatment of bacterial pneumonia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 1998-100296/09

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAX90576
                                                                                                                              The present invention describes a novel conjugate having one or more antibody fragments covalently attached to one or more nonproteinaceous polymer molecules, where the apparent size of the conjugate is at least about 500 kDa. Conjugates of antibody fragments which bind the human interleukin (IL) 8 with a nonproteinaceous polymer can be used for treating inflammatory disorders e.g. acute lung injury, ischaemic reperfusion disorder, and autoimmune diseases. They can also be used for treating e.g. inflammatory skin diseases including psoriasis and atopic dermatitis, systemic scleroderma and sclerosis, and astimatic diseases. The conjugates can also be used as reagents in an animal model system for in vivo study of the biological functions of the antigen recognised by the conjugate. The present sequence encodes the 5.12.14 light chain variable region and the human IgGl light chain constant region fusion in the antigen recognised by the conjugate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAX90576 standard;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an anti-interleukin-8 (IL-8) monoclonal antibody (MAb). The anti-IL-8 MAb comprises a sequence containing the CDRs (complementarity determining regions) of the humanized anti-IL-8 (G4.2.5ViIN35A light chain; and amino acids 24-253 of the humanized anti-IL-8 (G4.2.5ViIN35A heavy chain. The anti-IL-8 Abs and fragments can be used in diagnosis, for affinity purification of IL-8 from recombinant cell culture or natural sources and for the treatment of inflammatory disorders e.g. adult respiratory distress syndrome. Nucleic acids encoding the anti-IL-8 MAb can be associated in a vector with another gene encoding another protein or protein fragment to produce a fusion protein which can make isolation and/or purification of the protein an easier process. The present sequence represents the nucleotide sequence of murine anti-IL-8 antibody 5.12.14 light chain variable region and the human igg1 light chain constant region. (Updated on 15-SEP-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid molecule encodes a polypeptide which is an anti-
interleukin-8 monoclonal antibody or antibody fragment useful for the
production of anti-interleukin-8 monoclonal antibodies or fragments.

```
Comprising administering to the mammal an effective amount of a conjugate cof a single antibody fragment covalently attached to 1 or 2 polyethylene cof glycol (PEG) molecules, where the antibody fragment is a F(ab')_2 comprising: (a) first chain that is either a light chain or a heavy chain (c) if the first chain or a light chain opposite the covalently attached to 1 or 2 polyethylene comprising: (a) first chain that is either a light chain or a heavy chain; (b) a second chain that is either a light chain or a heavy chain; (c) a covalently attached to a first cysteine residue in the first cysteine residue in the first or second heavy chain; where covalently attached to a first cysteine residue in the first or second cysteine residue in the first or second dysteine residue in the first or second dysteine residue in the first or second opposite the second cysteine residue in the first or second opposite chain, where the first or second opposite chain, where the first or second opposite the first or second opposite chain, where the second cysteine residue in the first or second opposite the chain, where chain, where the first or second opposite the the binds to human interleukin-8 (II-8), and where the apparent size of the conjugate is at least about 500 kD. The antigen binding sites may be derived from continuing monoclonal antibodies 5.12.14 or 664.2.5. The method is useful for treating lung injury, including adult respiratory discress syndrome (ARDS) in a mammal and inflammatory diseases (such as asthma, continuing and continuing and sectores syndrome continuing and con
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Treating acute lung injury in mammal by administering to mammal a 500 conjugate comprising F(ab') 2 antibody fragment that binds to human interleukin-8, covalently attached to one or two polyethylene glycol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Hsei V,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/clone_Torgan: B-cells; Vector: poTB7; Site_1: XhoI;
/site_2: EcoRI, cDNA made by oligo-dT priming.
Directionally cloned into EcoRI/XhoI sites using the following 5' adaptor: GGCACGA(G). Size-selected >500bp for average insert size 1.8kb. Library constructed by Ling Hong in the laboratory of Gerald M. Rubin (University of California, Berkeley) using ZAP-cDNA synthesis kit (Stratagene) and Superscript II RT (Life Technologies).
Note: this is a NIH_MGC Library."
